## 1 Esempio con termini

The `\Gls{latex}` `Latex` typesetting markup language is specially suitable for documents that include `\gls{maths}` `mathematics`. Formulas are rendered properly and easily once one gets used to the commands.

## 2 Esempio con acronimi

Given a set of numbers, there are elementary methods to compute its `\acrlong{gcd}` `Greatest Common Divisor`, which is abbreviated `\acrshort{gcd}` `GCD`. This process is similar to that used for the `\acrfull{lcm}` `Least Common Multiple (LCM)`.

## 3 Lista dei termini

### **formula**

A mathematical expression. 1

### **latex**

Is a mark up language specially suited for scientific documents. 1

### **mathematics**

Mathematics is what mathematicians do. 1

## 4 Lista degli acronimi

### **GCD**

Greatest Common Divisor. 1

### **LCM**

Least Common Multiple. 1
